VITYARTHI PROJECT

DIGITAL LITERACY PROJECT REPORT

SUBMITTED BY: ANIRUDDH KOTHIYAL

REGISTRATION NUMBER: 25BCE11046

COURSE: B.Tech CSE (CORE)

Course Code: CSE0001

INTRODUCTION

Digital literacy means having the ability to use digital tools like computers, smartphones, and the internet in a smart and responsible way. In today's time these skills are very important for students because most of our learning, communication, and daily activities depend on technology.

As a Student Digital Ambassador, this project helped me understand how to use digital platforms properly and guide others as well.

The project included different practical tasks like designing an infographic, creating online profiles, exploring useful platforms, learning professional communication, and understanding cybercrime. Through this project, I got hands-on experience and learned how to use digital tools in a more effective and safe manner. It helped me to learn about the project development and management and showed me the importance of different platforms.

TASK 1: DIGITAL LITERACY INFOGRAPHIC

For this task, I created and updated my profiles on GitHub, LinkedIn, and Stack Overflow. I chose these platforms because they are useful for students who want to build their skills and create a professional presence online.

GitHub helps in storing projects and managing projects, which will be useful to showcase my work in the future and to build experience through it.

LinkedIn is helpful for building a professional profile and connecting with other students and professionals and to post my achievements and learnings it will help me to keep myself updated with the technological world.

Stack Overflow is a platform where people ask and answer coding questions, which is very useful when facing problems while learning programming.

In the coming years, I plan to regularly upload my projects on github and improve my coding skills. I will keep my linkedin profile updated and try to connect with more people from my field. I also want to use stack overflow to learn from others and eventually help others once I gain more knowledge. These platforms will definitely support my learning and career growth.

TASK 2:- BUILD YOUR STUDENT DIGITAL PORTFOLIO

For this task, I set up and improved my profiles on github, linkedIn, and stack overflow. I chose these platforms because each one helps in a different area of my learning and future career.

GitHub allows me to store my projects in one place and keep track of what I build over time. It also gives me a way to show my work to others.

LinkedIn is useful for creating a professional profile where I can connect with other students and professionals, and also stay informed about opportunities like internships and events.

Stack Overflow helps me when I get stuck while coding, as I can find solutions explained by people who have already faced similar problems.

In the coming years, I plan to regularly upload my work on GitHub and improve my coding skills through practice, it will also help to understand the project development and management in further years.

I will use LinkedIn to grow my network and keep my profile updated with my achievements and to keep myself updated with the technical world of innovation.

I also want to become more active on Stack Overflow by not only learning from others but also helping

beginners once I gain more knowledge. Overall, these platforms will support my academic growth and help me prepare for my career.

TASK 3: CODING & COLLABORATION PLATFORMS

In this task, I explored different online platforms that help in learning and collaboration. I used Hacker rank to solve a basic coding problem, which helped me understand how coding questions are structured and how to approach them. It was a good starting point for improving my problem-solving skills and to implement the programming language techniques to solve complex problems.

I also created a google form of digital literacy with questions related to digital literacy. This form can be used to test the knowledge of students in a simple way to check their learning regarding digital literacy. I also checked the responses using Google Sheets, which

showed me how data can be collected and analysed easily.

This task helped me understand how digital tools can be used not only for learning but also for interacting and sharing information with others. These skills will be very useful in my academic journey and I can also take inspiration from others project and understand different types of approaches to problems.

TASK 4: EMAIL ETIQUETTE & SOCIAL MEDIA GUIDELINES

In this task, I learned the importance of professional communication through email. I wrote two formal emails, one requesting an assignment deadline extension to the professor and another applying for an internship. While writing these emails, I focused on proper structure, including subject line, greeting, clear message, clear format and professional closing.

I also created a list of Do’s and Don’ts for responsible social media usage. Poor communication or inappropriate behaviour online can lead to misunderstandings and damage one’s reputation and can also result in punishment.

For example, sending an unclear or rude email to a professor may create a negative impression. This task helped me understand how to communicate clearly, respectfully, and professionally in a digital environment.

Poor digital communication can create problems very easily. For example if a student sends an email to a professor in a rude or unclear way, it can lead to misunderstandings. The professor might not understand the message properly or may feel disrespected, which can leave a bad impression on the student.

The same thing can happen on social media. Sometimes people post something without thinking much, and others may take it in the wrong way. This can lead to unnecessary arguments or even affect someone’s reputation.

In such situations, it is better to communicate more carefully. Taking a few seconds to read the message

before sending it using simple and polite language, and thinking about how others might understand it can make a big difference. Good communication helps in avoiding confusion and maintaining a positive image online.

TASK 5: CYBERCRIME AWARENESS

For this task, I studied phishing and pharming as a type of cybercrime.
Phishing is a type of cyberattack in which an attacker pretends to be a trustworthy source, such as a bank or a known website, to trick people into sharing sensitive information like passwords, otp, or credit card details. Phishinwg involves tricking users into sharing sensitive information such as passwords or bank details through fake emails or websites. I learned that such attacks are very common and can lead to serious consequences like financial loss or identity theft.

Pharming is a cyberattack where a user is redirected from a legitimate website to a fake one without their

knowledge, even when they enter the correct web address.

While researching about cybercrime, what really surprised me how easily people can be tricked by simple methods like phishing. I used to think scams required advanced hacking skills, but I realized that many of them actually rely on small human mistakes like trusting a random link or message without thinking twice. It was honestly surprising to see how real fake emails and websites can look, almost identical to the original ones.

Because of this, I've decided to be much more careful online. Earlier, I didn't always pay attention to links or where they were coming from, but now I'll make sure to double-check before clicking anything or sharing personal information. This task made me realize that being aware and alert is one of the most important things when it comes to staying safe in the digital world.

CONCLUSION

This project helped me gain a clear understanding of digital literacy and its importance in the modern developing world.

It made me work on various task of digital world which helped me to develop methods and skills about the various projects and concepts.

It helped me to build a professional online portfolio, a space where I can discuss about the topics regarding my tech skills and learn from the digital environment and communicate properly in a digital environment.

I also became more aware of online risks of cyberattacks like phishing pharming and how to stay safe. Overall, this project improved my technical, communication, and awareness skills, which will be useful throughout my academic journey and future career.
